MARK 2

Explain variable function

- If we call variable name appended with paranthesis then the same function is called.

- We assign string with same name as function name

- function is called when that variable is called with

```php
<?php
  function hello(){
    echo "hello";
  }

  hell = 'hello';
  hell();
?>
```

Write use of array_flip()

Syntax: array_flip($array)

Array flip → associative array and it has key - value are exchanged

How will you create array in PHP

- Arrays are data structure and are used to store multiple value in one variable
